Tabstop Accessibility Reports

Website Accessibility Audit Report

https://pressroomevents.com/ · scanned 2026-11-11 · 4 page(s) at desktop (1366px) and mobile (390px) widths · standard: WCAG 2.1/2.2 Level AA

Summary

351	12	339	0	8
WCAG issue instances	critical	serious	moderate / minor	distinct problems

The most important problems to fix first are: **images must have alternative text** (8); **zooming and scaling must not be disabled** (4); **keyboard focus is not visible** (137). Fixing a shared template (header, footer, product card) usually fixes the same issue on every page at once.

An “instance” is one element on one page; the same element found at both screen widths is counted once. Severity follows axe-core’s impact rating: **critical** blocks some users entirely, **serious** causes significant difficulty, **moderate**/**minor** cause friction.

Pages scanned

Page	Desktop	Mobile	WCAG failures found (desktop / mobile)
`https://pressroomevents.com/`	scanned	scanned	74 / 57
`https://pressroomevents.com/packages/`	scanned	scanned	57 / 49
`https://pressroomevents.com/vendors/`	scanned	scanned	66 / 64
`https://pressroomevents.com/faq/`	scanned	scanned	17 / 15

Findings — WCAG failures, most severe first

CRITICAL **1. Images must have alternative text**

8 instance(s) · WCAG 1.1.1 Non-text Content (Level A)

An image has no text alternative, so a blind visitor using a screen reader hears nothing (or the file name) instead of what the picture shows.

> **How to fix:** Add a short alt attribute that says what the image communicates: <img src="crown.jpg" alt="Porcelain crown on a lower molar">. If the image is purely decorative, use alt="" so screen readers skip it.

CRITICAL

2. Zooming and scaling must not be disabled

4 instance(s) · WCAG 1.4.4 Resize Text (Level AA)

The page blocks pinch-zoom on phones, so people with low vision cannot enlarge text.

> **How to fix:** Remove maximum-scale=1 / user-scalable=no: <meta name="viewport" content="width=device-width, initial-scale=1">.

Pages: pressroomevents.com (1), /packages/ (1), /vendors/ (1), /faq/ (1) · found at desktop, mobile width · detected by axe-core rule meta-viewport

pressroomevents.com · desktop

`meta[name="viewport"]`

`<meta name="viewport" content="width=device-width, initial-scale=1.0, maximum-scale=1.0, user-scalable=0">`

user-scalable on <meta> tag disables zooming on mobile devices

SERIOUS **3. Keyboard focus is not visible** 137 instance(s) · WCAG 2.4.7 Focus Visible (Level AA)

When a keyboard user tabs onto these elements nothing visibly changes, so they cannot see where they are on the page.

> **How to fix:** Do not remove the browser outline. Add a clear focus style, e.g. a:focus-visible, button:focus-visible, input:focus-visible { outline: 3px solid #1a5fb4; outline-offset: 2px; }.

Pages: pressroomevents.com (10), /packages/ (56), /vendors/ (55), /faq/ (16) · found at desktop width · detected by tab-traversal

...and 131 more instance(s); the full list is in the JSON file delivered with this report.

SERIOUS **4. Links must have discernible text**

112 instance(s) · WCAG 2.4.4 Link Purpose (In Context), 4.1.2 Name, Role, Value (Level A)

A link has no readable text (often an icon-only link such as a social-media logo or a linked image without alt), so a screen reader announces only "link".

> **How to fix:** Put visible text inside the link, or add an accessible name: <svg aria-hidden="true">...</svg>.

Pages: pressroomevents.com (61), /packages/ (46), /vendors/ (3), /faq/ (2) · found at desktop, mobile width · detected by axe-core rule link-name

Element is in tab order and does not have accessible text; Element does not have text that is visible to screen readers

...and 106 more instance(s); the full list is in the JSON file delivered with this report.

SERIOUS **5. Elements must meet minimum color contrast ratio thresholds**

69 instance(s) · WCAG 1.4.3 Contrast (Minimum) (Level AA)

Text is too faint against its background. People with low vision, older visitors and anyone on a phone in sunlight may not be able to read it. WCAG AA requires a contrast ratio of at least 4.5:1 for normal text and 3:1 for large text.

> **How to fix:** Darken the text or lighten the background until the ratio reaches 4.5:1 (3:1 for text 24px+ or 18.66px+ bold). The exact colours and measured ratio are listed per element below; a free checker such as WebAIM's contrast checker shows a passing shade.

Pages: pressroomevents.com (7), /packages/ (8), /vendors/ (46), /faq/ (8) · found at desktop, mobile width · detected by axe-core rule color-contrast

pressroomevents.com · desktop
`#et-info-phone`

Element has no title attribute; aria-label attribute does not exist or is empty

SERIOUS **8. All touch targets must be 24px large, or leave sufficient space**

3 instance(s) · WCAG 2.5.8 Target Size (Minimum) (Level AA)

A tap target is smaller than 24×24 CSS pixels with too little spacing, making it hard to hit for people with tremors or on a phone.

> **How to fix:** Make the clickable area at least 24×24px (padding counts), or add space around it.

Pages: pressroomevents.com (3) · found at desktop width · detected by axe-core rule target-size

pressroomevents.com · desktop

`#input_1_6_1`

```
<input type="number" name="input_6[]" id="input_1_6_1" value="" min="0" max="12" step="1" placeholder="HH" aria-required="true" aria-labelledby="input_1_6_1_label gfield_label_1_6">
```

Target has insufficient size because it is partially obscured (smallest space is 53.2px by 23px, should be at least 24px by 24px); Target has insufficient space to its closest neighbors. Safe clickable space has a diameter of 0px instead of at least 24px.

pressroomevents.com · desktop

`#datepicker_toggle_input_1_7`

```
<button type="button" id="datepicker_toggle_input_1_7" class="gform-datepicker-toggle gform-datepicker-toggle--default accCalendar aria-date-picker gform-button gform-theme-button gform-theme-button--simple gform-theme-button--simple-in-ctrl" aria-expanded="fa
```

Target has insufficient size (20px by 20px, should be at least 24px by 24px); Target has insufficient space to its closest neighbors. Safe clickable space has a diameter of 20px instead of at least 24px.

pressroomevents.com · desktop

`#input_1_8_1`

```
<input type="number" name="input_8[]" id="input_1_8_1" value="" min="0" max="12" step="1" placeholder="HH" aria-required="true" aria-labelledby="input_1_8_1_label gfield_label_1_8">
```

Target has insufficient size because it is partially obscured (smallest space is 53.2px by 23px, should be at least 24px by 24px); Target has insufficient space to its closest neighbors. Safe clickable space has a diameter of 0px instead of at least 24px.

Best-practice recommendations

These are not WCAG failures on their own, but fixing them makes the site noticeably easier to use with a keyboard or screen reader.

BEST PRACTICE

9. All page content should be contained by landmarks

74 instance(s) · not a WCAG success criterion

Some content sits outside any landmark (header, nav, main, footer), so screen-reader users who move by landmarks can miss it.

> **How to fix:** Place all content inside <header>, <nav>, <main> or <footer> (or an element with an equivalent role).

BEST PRACTICE **11. No "skip to content" link** 4 instance(s) · WCAG 2.4.1 Bypass Blocks

The first thing the Tab key reaches is not a "skip to content" link, so keyboard users must tab through the whole header and menu on every page.

> **How to fix:** Add Skip to main content as the first element in <body>, visible on focus, and id="main" on <main>.

BEST PRACTICE **12. Heading levels should only increase by one**

4 instance(s) · not a WCAG success criterion

Heading levels skip (e.g. an H2 followed by an H4), which makes the page outline confusing for people who navigate by headings.

> **How to fix:** Use heading levels in order (H1 → H2 → H3) and style them with CSS rather than picking a level for its size.

Heading order invalid

BEST PRACTICE **13. Headings should not be empty** 5 instance(s) · not a WCAG success criterion

A heading tag contains no text, so screen-reader users navigating by headings hit a blank.

> **How to fix:** Remove the empty heading tag or put the heading text inside it.

Keyboard and zoom checks

We pressed Tab through each page (up to 70 stops) and recorded where focus went, whether it was visible, and whether it got stuck. We also narrowed the window to 320px (equivalent to 400% zoom) to test reflow.

Page	Tab stops	Skip link first	Stops with no visible focus	Focus trap	Reflow at 320px

Heading outline of the homepage

Screen-reader users often navigate by headings; this is the outline they hear.

`H1` Tacoma’s most exciting wedding and event space.
- `H2` *(empty)*
- `H2` LGBTQIA+ friendly and a perfect corporate event space!
- `H2` Imagine the possibilities as you view the atmosphere and art of where the past meets moder
- `H2` See this newly reclaimed urban rustic masterpiece, lovingly restored with unmatched crafts
- `H2` Treat your guests to Tacoma’s beautiful history.
- `H2` A stunning Bridal Suite for your special day.
- `H2` Perfect for any special event.
- `H2` Step back in time.
- `H2` Let a Piece of Tacoma’s History Elevate your Guest’s Experience.
- `H2` Book Your Event

What this report cannot tell you

Automated testing reliably catches a large share of common, objectively testable problems (missing alt text, missing labels, contrast, missing names, language, some structure) — industry data puts it at roughly half of real-world issues by volume — but it **cannot** judge:

- whether alt text and link text are *meaningful* (only whether they exist);
- whether the reading and focus order make sense, or whether every task can be completed by keyboard (we test Tab movement, not every interaction);
- how the site behaves with real screen readers (JAWS, NVDA, VoiceOver) and voice control;
- captions and transcripts for video/audio content, or the accessibility of PDFs and third-party widgets inside iframes (booking, chat, payments);
- error handling and instructions in multi-step forms and checkout;
- pages behind a login, or states that only appear after interaction (menus, modals, validation messages).

A clean automated result is therefore **not** evidence of WCAG conformance. For a full conformance assessment, combine these fixes with manual testing by a person using assistive technology.

This report is a technical assessment, not legal advice. It does not certify compliance with the ADA, the European Accessibility Act or any other law, and it does not guarantee protection from legal claims.
