Tabstop Accessibility Reports

Homepage Accessibility Summary

https://samishbaydental.com/ · scanned 2026-11-11 · 1 page(s) at desktop (1366px) width · standard: WCAG 2.1/2.2 Level AA

Summary

8	0	8	0	4
WCAG issue instances	critical	serious	moderate / minor	distinct problems

The most important problems to fix first are: **keyboard focus is not visible** (3); **links must have discernible text** (2); **all touch targets must be 24px large, or leave sufficient space** (2). Fixing a shared template (header, footer, product card) usually fixes the same issue on every page at once.

An “instance” is one element on one page; the same element found at both screen widths is counted once. Severity follows axe-core’s impact rating: **critical** blocks some users entirely, **serious** causes significant difficulty, **moderate**/**minor** cause friction.

`https://samishbaydental.com/`	scanned	not run	5 / —

Top problems on your homepage

SERIOUS **1. Keyboard focus is not visible** 3 instance(s) · WCAG 2.4.7 Focus Visible (Level AA)

When a keyboard user tabs onto these elements nothing visibly changes, so they cannot see where they are on the page.

> **How to fix:** Do not remove the browser outline. Add a clear focus style, e.g. a:focus-visible, button:focus-visible, input:focus-visible { outline: 3px solid #1a5fb4; outline-offset: 2px; }.

Pages: samishbaydental.com (3) · found at desktop width · detected by tab-traversal

samishbaydental.com · desktop
`<div> Carousel`
No change in outline, shadow, border, colour or underline when focused by Tab

samishbaydental.com · desktop
`<button> Previous`
No change in outline, shadow, border, colour or underline when focused by Tab

SERIOUS **2. Links must have discernible text**

2 instance(s) · WCAG 2.4.4 Link Purpose (In Context), 4.1.2 Name, Role, Value (Level A)

A link has no readable text (often an icon-only link such as a social-media logo or a linked image without alt), so a screen reader announces only "link".

> **How to fix:** Put visible text inside the link, or add an accessible name: <svg aria-hidden="true">...</svg>.

Pages: samishbaydental.com (2) · found at desktop width · detected by axe-core rule link-name

samishbaydental.com · desktop
`#yui_3_17_2_1_1794390112133_220 > .margin-wrapper > .image-slide-anchor.content-fill[aria-label=""]`
`<a href="https://www.instagram.com/p/DfcuN2iFLf4/" target="_blank" aria-label="" class=" image-slide-anchor content-fill " style="overflow: hidden;">`
Element is in tab order and does not have accessible text; Element does not have text that is visible to screen readers

samishbaydental.com · desktop
`#yui_3_17_2_1_1794390112133_224 > .margin-wrapper > .image-slide-anchor.content-fill[aria-label=""]`
`<a href="https://www.instagram.com/p/DfNC0HaG-JP/" target="_blank" aria-label="" class=" image-slide-anchor content-fill " style="overflow: hidden;">`
Element is in tab order and does not have accessible text; Element does not have text that is visible to screen readers

SERIOUS **3. All touch targets must be 24px large, or leave sufficient space**

2 instance(s) · WCAG 2.5.8 Target Size (Minimum) (Level AA)

A tap target is smaller than 24×24 CSS pixels with too little spacing, making it hard to hit for people with tremors or on a phone.

> **How to fix:** Make the clickable area at least 24×24px (padding counts), or add space around it.

Pages: samishbaydental.com (2) · found at desktop width · detected by axe-core rule target-size

samishbaydental.com · desktop
`.sqsrte-small > a[href="tel:3605436808"]`
`<a href="tel:3605436808">(360) 543 - 6808</a>`
Target has insufficient size (121.8px by 21.5px, should be at least 24px by 24px); Target has insufficient space to its closest neighbors. Safe clickable space has a diameter of 19px instead of at least 24px.

samishbaydental.com · desktop
`a:nth-child(7)`
`<a href="mailto:admin@samishbaydental.com?">admin@samishbaydental.com</a>`
Target has insufficient size (223.2px by 21.5px, should be at least 24px by 24px); Target has insufficient space to its closest neighbors. Safe clickable space has a diameter of 19px instead of at least 24px.

This is the free homepage summary. The full Accessibility Audit Report ($149) covers up to 10 key pages (contact, booking, products, cart…) at desktop and phone widths, with every instance, its exact element and the code fix for each.

Keyboard and zoom checks

We pressed Tab through each page (up to 70 stops) and recorded where focus went, whether it was visible, and whether it got stuck. We also narrowed the window to 320px (equivalent to 400% zoom) to test reflow.

Page	Tab stops	Skip link first	Stops with no visible focus	Focus trap	Reflow at 320px
samishbaydental.com	30	yes	3	no	ok

Heading outline of the homepage

Screen-reader users often navigate by headings; this is the outline they hear.

What this report cannot tell you

Automated testing reliably catches a large share of common, objectively testable problems (missing alt text, missing labels, contrast, missing names, language, some structure) — industry data puts it at roughly half of real-world issues by volume — but it **cannot** judge:

- whether alt text and link text are *meaningful* (only whether they exist);
- whether the reading and focus order make sense, or whether every task can be completed by keyboard (we test Tab movement, not every interaction);
- how the site behaves with real screen readers (JAWS, NVDA, VoiceOver) and voice control;
- captions and transcripts for video/audio content, or the accessibility of PDFs and third-party widgets inside iframes (booking, chat, payments);
- error handling and instructions in multi-step forms and checkout;
- pages behind a login, or states that only appear after interaction (menus, modals, validation messages).

A clean automated result is therefore **not** evidence of WCAG conformance. For a full conformance assessment, combine these fixes with manual testing by a person using assistive technology.

Tabstop Accessibility Reports · Report generated with axe-core 4.10.2 (Deque Systems, MPL-2.0) and scripted Chromium checks on 2026-11-11. Results reflect the pages as they loaded at scan time.
